i1Pro 3 Plus for Print

X-rite PANTONE®

Color Profiling Without Limitations.

Continuing to revolutionize the market as the leader in color profiling solutions, X-Rite Pantone is proud to announce the i1Pro 3 Plus.

Designed for imaging, print, and textile professionals who seek the highest level of color accuracy. The i1Pro 3 Plus quickly and efficiently creates color profiles from a wide variety of substrates. With a larger aperture to capture a broader sample area, the i1Pro 3 Plus can create more accurate profiles for fast and consistent color. The optional polarization feature reduces reflections in shadows and highlights, yielding more pleasing color reproduction.

Whether printing flexo, Gravure, or digital, grand- and wide-format printers must profile and linearize with each substrate to achieve the highest level of color accuracy. Using new targets and standards, the i1Pro 3 Plus reduces color measurement variability to achieve correct calibration and create ICC profiles. It also integrates with the i1iO table for fast, repeatable, and automated production color on a variety of unique print and packaging substrates, including thin films, labels, cardboard, fabric, and plastics. Providing you with the utmost in profiling capabilities.

Materially Diverse.

- Enables profiling of a broad range of material substrates and surfaces with a new larger 8mm aperture:
 - Industrial materials: corrugated, glass, metal, wood, and vinyl
 - **Packaging and Printing:** thin films, labels, cardboard, and plastics
 - Signage: grand format, backlit, display films
 - Textiles: organic, synthetic, weaves, and sublimation sheets
 - Ceramics: ceramic tiles and laminates
 - Monitors and Displays: up to 5000 nits of brightness
- Reduces color measurement variability with optional polarization capabilities, helping to correct for unique material qualities
 - Polarization reduces specular highlights, providing "better blacks" and richer colors on unique surfaces making measurements for profiles more accurate
- Supports emission scanning for backlit textiles, films, and other materials used in displays and signage

Automation and Calibration: Simplified.

- Achieves correct calibration and creates ICC profiles with the addition of new targets and standards, resulting in a reduction of waste and an increased ROI
- When combined with i1iO, the i1Pro 3 Plus optimizes automated file creation allowing for a reduction of wasted time and materials during production
- Delivers accurate measurements of larger print materials, substrates, and surfaces
- Simultaneously measures M0, M1, and M2 in a single pass to account for optical brighteners
- Offers a new LED illuminant, improving device reliability and provides four measurement conditions

Service Support and Warranty

X-Rite's color analysis and measurement solutions are engineered and manufactured to the most rigorous quality standards. These standards are backed by comprehensive global service, superior phone and web support, and preventative maintenance options to optimize your long-term investment. We have developed service support and warranty plans that are unique to your organization's specific products and needs. Learn more by reviewing our service offerings on our website at: www.xrite.com/page/service-warranty. Still unsure of what you need? Contact us directly at: servicesupport@xrite.com
